Android telefoon. How to install android on samsung. Actionbardrawertoggle example in android. How to change actionbardrawertoggle icon color in android.

```
This class provides a handy way to tie together the functionality of DrawerLayout and the framework ActionBar to implement the recommended design for navigation drawers. To use ActionBarDrawerToggle, create one in your Activity and call through to the following methods corresponding to your Activity callbacks. Call syncState() from your Activity's onCreate to synchronize the indicator with the state of the linked DrawerLayout after onRestoreInstanceState has occurred. ActionBarDrawerToggle can be used directly as a DrawerLayout.DrawerListener, or if you are already providing your own listener, call through to each of the listener methods from your own. You can customize the animated toggle by defining the drawerArrowStyle in your ActionBar theme. interface ActionBarDrawerToggle.Delegate interface ActionBarDrawerToggle.DelegateProvider Allows an implementing Activity to return an ActionBarDrawerToggle.Delegate to use with ActionBarDrawerToggle. From class java.lang.Object Object clone() boolean equals(Object arg0) void finalize() final Class getClass() int hashCode() final void notify() final void notifyAll() String toString() final void wait(long arg0, int arg1) final void wait(long arg0) final void wait() public ActionBarDrawerToggle(Activity activity, DrawerLayout drawerLayout, int openDrawerContentDescRes, int closeDrawerContentDescRes) Construct a new ActionBarDrawerToggle. The given Activity will be linked to the specified DrawerLayout and its ActionBar's Up button will be set to a custom drawable. This drawable shows a Hamburger icon when drawer is closed and an arrow when drawer is open. It animates between these two states as the drawer opens. String resources must be provided to describe the open/close drawer actions for accessibility services. Parameters activity Activity: The Activity hosting the drawer. drawerLayout DrawerLayout: The DrawerLayout to link to the given Activity's ActionBar openDrawerContentDescRes int: A String resource to describe the "open drawer" action for accessibility closeDrawerContentDescRes int: A String resource to describe the "close drawer" action for accessibility public ActionBarDrawerToggle(Activity activity, DrawerLayout drawerLayout, Toolbar toolbar, int openDrawerContentDescRes, int closeDrawerContentDescRes) Construct a new ActionBarDrawerToggle with a Toolbar. The given Activity will be linked to the specified DrawerLayout and the Toolbar's navigation icon will be set to a custom drawable. Using this constructor will set Toolbar's navigation click listener to toggle the drawer when it is clicked. This drawable shows a Hamburger icon when drawer is closed and an arrow when drawer is open. It animates between these two states as the drawer opens. String resources must be provided to describe the open/close drawer actions for accessibility services. Please use ActionBarDrawerToggle(Activity, DrawerLayout, int, int) if you are setting the Toolbar as the ActionBar of your activity. Parameters activity Activity: The Activity hosting the drawer. drawerLayout DrawerLayout: The DrawerLayout to link to the given Activity's ActionBar toolbar Toolbar: The toolbar to use if you have an independent Toolbar. openDrawerContentDescRes int: A String resource to describe the "open drawer" action for accessibility closeDrawerContentDescRes int: A String resource to describe the "close drawer" action for accessibility public boolean isDrawerSlideAnimationEnabled() Returns boolean whether the drawer slide animation is enabled public void onConfigurationChanged(Configuration newConfig) This method should always be called by your Activity's onConfigurationChanged method. Parameters newConfig Configuration: The new configuration public void onDrawerClosed(View drawerView) DrawerLayout.DrawerListener callback method. If you do not use your ActionBarDrawerToggle instance directly as your DrawerLayout's listener, you should call through to this method from your own listener object. Parameters drawerView View: Drawer view that is now closed public void onDrawerOpened(View drawerView) DrawerLayout.DrawerListener callback method. If you do not use your ActionBarDrawerToggle instance directly as your DrawerLayout's listener, you should call through to this method from your own listener object. Parameters drawerView View: Drawer view that is now open public void onDrawerSlide(float viewDrawerView, float slideOffset) DrawerLayout.DrawerListener callback method. If you do not use your ActionBarDrawerToggle instance directly as your DrawerLayout's listener, you should call through to this method from your own listener object. Parameters drawerView View: The child view that was moved slideOffset float: The new offset of this drawer within its range, from 0-1 public void onDrawerStateChanged(int newState) DrawerLayout.DrawerListener callback method. If you do not use your ActionBarDrawerToggle instance directly as your DrawerLayout's listener, you should call through to this method from your own listener object. Parameters newState int: The new drawer motion state public boolean onOptionsItemSelected(Menuitem item) This method should be called by your Activity's onOptionsItemSelected method. If it returns true, your onOptionsItemSelected method should return true and skip further processing. Parameters item Menuitem: the MenuItem instance representing the selected menu item Returns boolean true if the event was handled and further processing should not occur public void setDrawerArrowDrawable(DrawerArrowDrawable drawable) Sets the DrawerArrowDrawable that should be shown by this ActionBarDrawerToggle. Parameters drawable DrawerArrowDrawable: DrawerArrowDrawable that should be shown by this ActionBarDrawerToggle public void setDrawerIndicatorEnabled(boolean enable) Enable or disable the drawer indicator. The indicator defaults to enabled. When the indicator is disabled, the ActionBar will revert to displaying the home-as-up indicator provided by the Activity's theme in the android.R.attr.homeAsUpIndicator attribute instead of the animated drawer glyph. Parameters enable boolean: true to enable, false to disable public void setDrawerSlideAnimationEnabled(boolean enable) Specifies whether the drawer arrow should animate when the drawer position changes. Parameters enable boolean: if this is true then the animation will run, else it will be skipped public void setHomeAsUpIndicator(Drawable indicator) Set the up indicator to display when the drawer indicator is not enabled. If you pass null to this method, the default drawable from the theme will be used. Parameters indicator Drawable: A drawable to use for the up indicator, or null to use the theme's default See also: setDrawerIndicatorEnabled(boolean) public void setHomeAsUpIndicator(int resId) Set the up indicator to display when the drawer indicator is not enabled. If you pass 0 to this method, the default drawable from the theme will be used. Parameters resId int: Resource ID of a drawable to use for the up indicator, or 0 to use the theme's default See also: setDrawerIndicatorEnabled(boolean) public void setToolBarNavigationClickListener(View.OnClickListener listener) When DrawerToggle is constructed with a Toolbar, it sets the click listener on the Navigation icon. If you want to listen for clicks on the Navigation icon when DrawerToggle is disabled (setDrawerIndicatorEnabled(boolean) public void syncState() Synchronize the state of the drawer indicator/affordance with the linked DrawerLayout. This method should be called from your Activity's onCreate method to synchronize after the DrawerLayout's instance state has been restored, and any other time when the state may have diverged in such a way that the ActionBarDrawerToggle was not notified. (For example, if you stop forwarding appropriate drawer events for a period of time.) origin: android/Anki-Android/** When using the ActionBarDrawerToggle, you must call it during * onCreate() and onConfigurationChanged(). */ @Override protected void onCreate(Bundle savedInstanceState) { super.onCreate(savedInstanceState); // Sync the toggle state after onRestoreInstanceState has occurred. if (mDrawerToggle != null) { mDrawerToggle.syncState(); } } origin: ArthurHub/Android-Image-Cropper@Override protected void onCreate(Bundle savedInstanceState) { super.onCreate(savedInstanceState); setContentView(R.layout.activity_main); getSupportActionBar().setDisplayHomeAsUpEnabled(true); getSupportActionBar().setHomeAsUpIndicator(true); mDrawerLayout = (DrawerLayout) findViewById(R.id.drawer_layout); mDrawerToggle = new ActionBarDrawerToggle(this, mDrawerLayout, R.string.main_drawer_open, R.string.main_drawer_close); mDrawerToggle.setDrawerIndicatorEnabled(true); mDrawerToggle.setOnClickListener(this); if (savedInstanceState == null) { setMainFragmentByPreset(CropDemoPreset.RECT); } } origin: ArthurHub/Android-Image-Cropper@Override public boolean onOptionsItemSelected(Menuitem item) { if (mDrawerToggle.onOptionsItemSelected(item)) { return true; } if (mCurrentFragment != null && mCurrentFragment.onOptionsItemSelected(item)) { return true; } return super.onOptionsItemSelected(item); } @Override protected void onCreate(Bundle savedInstanceState) { if (Daedalus.isDarkTheme()) { setTheme(R.style.AppTheme_Dark_NoActionBar_TransparentStatusBar); } super.onCreate(savedInstanceState); instance = this; setContentView(R.layout.activity_main); Toolbar toolbar = findViewById(R.id.toolbar); //setSupportActionBar(toolbar); //causes toolbar issues DrawerLayout drawer = findViewById(R.id.main_drawer_layout); ActionBarDrawerToggle toggle = new ActionBarDrawerToggle(this, drawer, toolbar, R.string.navigation_drawer_open, R.string.navigation_drawer_close); drawer.addDrawerListener(toggle); toggle.syncState(); NavigationView navigationView = findViewById(R.id.nav_view); navigationView.setNavigationItemSelectedListener(this); ((TextView) navigationView.getHeaderView(0).findViewById(R.id.textView_nav_version)).setText(getString(R.string.nav_version) + " " + BuildConfig.VERSION_NAME); ((TextView) navigationView.getHeaderView(0).findViewById(R.id.textView_nav_git_commit)).setText(getString(R.string.nav_git_commit) + " " + BuildConfig.GIT_COMMIT); updateUserInterface(getIntent()); private void initDrawer() { setSupportActionBar(toolbar); navigationView.setItemIconTintList(null); ActionBarDrawerToggle toggle = new ActionBarDrawerToggle(this, drawer, toolbar, R.string.navigation_drawer_open, R.string.navigation_drawer_close); drawer.addDrawerListener(toggle); toggle.syncState(); navigationView.setNavigationItemSelectedListener(this); View headerView = navigationView.getHeaderView(0); TextView header = headerView.findViewById(R.id.header_username); String host = HttpUrl.parse(settings.url()).host(); header.setText(getString(R.string.connection_settings_user).getName().getHost()); TextView version = headerView.findViewById(R.id.header_versions); version.setText(getString(R.string.server_version, settings.serverVersion())); ImageButton refreshAll = headerView.findViewById(R.id.refresh_all); refreshAll.setOnClickListener(this.onRefreshAll); } origin: ankiroid/Anki-Android@Override public void onDrawerClosed(View drawerView) { super.onDrawerClosed(drawerView); supportInvalidateOptionsMenu(); if (pendingRunnable != null) { new Handler().post(pendingRunnable); pendingRunnable = null; } } origin: ankiroid/Anki-Android@Override public boolean onOptionsItemSelected(Menuitem item) { if (getDrawerToggle().onOptionsItemSelected(item)) { return true; } switch (item.getItemId()) { case android.R.id.home: closeStudyOptions(); return true; default: return super.onOptionsItemSelected(item); } } @Override public void onDrawerOpened(View drawerView) { super.onDrawerOpened(drawerView); refreshTitle(); //searchListAdapter.setCursor(StarManager.i.getMyStars()); } };
